

AI in the Wild

The First Reps Guide

Five real tasks to run this week with the AI you already have

A free guide from Wade Kerzie
Kerzie AI Solutions | kerzie.ai

What you will have after this guide:

- Five completed reps on real work. Not tutorials, not toy examples.
- A feel for the one skill that matters: steering
- Proof, in your own week, that the model was never the bottleneck

Time: about 10 minutes per rep. One a day for a week, or all five on a Saturday morning. Works with Claude or ChatGPT. The free tier is fine to start.

The only rule:

Use real work. Your inbox, your meetings, your documents. AI demos are forgettable. Reps on your actual job are not.

REP 1

The Inbox Rep

The lesson: context in, quality out.

Pick the messiest email thread in your inbox right now. Copy the whole thing.

PROMPT - paste this, then the thread

Here is an email thread from my work. First, summarize the situation in five bullets: what's being decided, who wants what, and what's stalled. Then draft my reply. My goals for the reply: [WRITE ONE SENTENCE - e.g., "get a decision by Friday without making the vendor defensive"]. Match a direct but warm professional tone.

What to notice: The first draft will be 80% right. Don't accept it. Tell it what's off: "shorter," "don't apologize," "you missed that Jim already approved this." Then watch round two. That correction you just made? That's steering. That's the whole skill.

REP 2

The Meeting Rep

The lesson: the fastest ROI in corporate life.

Take notes or a transcript from any meeting this week. Teams and Zoom both produce transcripts, and that counts.

PROMPT

Here are notes from a meeting I was in. Give me: 1) a summary of what happened and who said what, 2) every decision made, 3) every action item with owners, 4) anything that sounded like a risk nobody addressed. Then draft the follow-up message I should send to the group.

What to notice: It catches things you missed. It always does. Now imagine every meeting for the rest of your career getting this treatment automatically.

REP 3

The Brain Dump Rep

The lesson: your experience is the fuel.

Open the voice mode, or your phone's voice memo app, and talk for five minutes about a problem you're chewing on at work. Ramble. Stammer. Repeat yourself. Then hand it over.

PROMPT - if using a memo transcript

This is me thinking out loud about a work problem. Organize my thinking: what's the actual problem, what options did I mention, what am I clearly worried about? Then give me your read: which option fits what I said, and what am I not seeing?

What to notice: Twenty-five years of judgment just became input. The people winning with AI aren't the ones with the best prompts. They're the ones with the most context to pour in, and you have more than anyone in the building.

REP 4

The Document Rep

The lesson: you're the supervisor now.

Grab the report, proposal, or contract sitting in your queue that you've been avoiding.

PROMPT

I need to be sharp on this document for a meeting. Give me: 1) a one-page executive summary, 2) the five questions I'm most likely to get asked about it, with suggested answers, 3) anything in here that looks weak, missing, or worth challenging.

What to notice: Then actually skim the document and check it. You'll catch something it got wrong or overweighted. Good. That's not a failure, that's the division of labor: it does the reading, you do the judging. You can't supervise what you don't understand, but you already know how to supervise.

REP 5

The Delegation Rep

The lesson: steering is a management skill. You have it.

Think of a task you'd hand to a sharp junior person if you had one: research a competitor, draft a project plan, build a comparison of three vendors, outline a presentation.

Now write the brief exactly the way you'd give it to that person: the goal, the context they'd need, what good looks like, the deadline format. Paste the brief. That's it. That's the prompt.

What to notice: The better your brief, the better the work. Exactly like managing people. You've been training for AI your entire career. Nobody told you.

Your Week One Scorecard

- ☐ Rep 1: Turned a messy thread into a sent reply
- ☐ Rep 2: Ran a meeting through the treatment
- ☐ Rep 3: Talked a problem out loud and got it structured
- ☐ Rep 4: Walked into a meeting sharp on a doc you didn't fully read
- ☐ Rep 5: Delegated like a manager

Five boxes checked means you're ahead of most of your company. Not because you learned a tool. Because you started getting reps.

This is the tip of the iceberg.

These five reps prove the point. The next step is a system: an AI assistant that knows your role, your team, and your accounts, and remembers all of it every time you come back.

I wrote a free guide for that too: **AI Bootcamp Session 1 - Build Your Personal AI Work System.**
